Service Manual

ORDER NO. CRT3221

DVD MULTIMEDIA AV NAVIGATION SERVER

AVIC-N1 1/UCDVD AV NAVIGATION HEAD-UNIT AVIC-X1/EW

This service manual should be used together with the following manual(s):

Model No.	Order No.	Mech.Module	Remarks
CX-3016	CRT3056	MS3	DVD Mech. Module:Circuit Description, Mech. Description, Disassembly

NOTE:

- Manufactured under license from Dolby Laboratories. "Dolby" and the double-D symbol are trademarks of Dolby Laboratories.
- This product has the unit part number as below.

Unit Part No.	Description
CPN1899	Navigation Unit(AVIC-N1/UC)
CPN1901	Hideaway Unit(AVIC-N1/UC)
CPN1898	Navigation Unit(AVIC-X1/EW)
CPN1900	Hideaway Unit(AVIC-X1/EW)

^{*)} The unit part numbers listed above are not for the service components.

SAFETY INFORMATION

UC

CAUTION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

В

С

D

Е

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

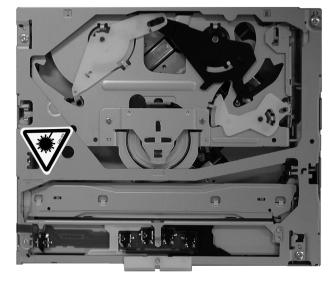

This product contains mercury. Disposal of this material may be regulated due to environmental considerations. For disposal or recycling information, please contact your local authorities or the Electronics Industries Alliance: www.eiae.org.

EW

- 1. Safety Precautions for those who Service this Unit.
- Follow the adjustment steps (see pages 192 through 255)in the service manual when servicing this unit. When check
 ing or adjusting the emitting power of the laser diode exercise caution in order to get safe, reliable results.

Caution:

- 1. During repair or tests, minimum distance of 13cm from the focus lens must be kept.
- 2. During repair or tests, do not view laser beam for 10 seconds or longer.
- 2. The triangular label is attached to the mechanism unit frame.

This product contains a laser diode of higher class than 1. To ensure continued safety, do not remove any covers or attempt to gain access to the inside of the product.

Refer all servicing to qualified personnel.

The following caution label appears on your unit.

Location: on the bottom of the unit

On the top of the player.

CAUTION : VISIBLE AND INVISIBLE LASER RADIATION WHEN OPEN AVOID EXPOSURE TO BEAM.

VORSICHT: SICHTBARE UND UNSICHTBARE LASERSTRAHLUNG, WENN ABDECKUNG GEÖFFNET NICHT DEM STRAHL AUSSETZEN!

ADVARSEL: SYNLIG OG USYNLIG LASERSTRÅLING VED ÅBNING UNDGÅ UDSÆTTELSE FOR STRÅLING.

VARNING : SYNLIG OCH OSYNLIG LASERSTRÅLNING NÄR DENNA DEL ÄR ÖPPNAD BETRAKTA EJ STRÅLEN.

. AVATTAESSA ALTISTUT NÄKYVÄ JA NÄKYMÄTTÖMÄLLE . LASERSATEIL YLLE. ÄLÄ KATSO SÄTEESEN. VARO!

WARNING!

The AEL (accessible emission level)of the laser power output is less than CLASS 1 but the laser component is capable of emitting radiation exceeding the limit for CLASS 1.

A specially instructed person should do servicing operation of the apparatus.

Laser diode characteristics

Wave length:

DVD:640~660nm

CD:770~810nm

Maximum output:2.48mw(Emitting period :9sec.)

DVD:705µw(Emitting period : unlimited)

Additionla Laser Caution

Transistors Q1101 and Q1102 in PCB drive the laser diodes for DVD and CD respectively. When Q1101 or Q1102 is shorted between their terminals, the laser diodes for DVD or CD will radiate beam. If the top cover is removed with no disc loaded while such short-circuit is continued, the naked eyes may be exposed to the laser beam.

AVIC-N1/UC

Ε

DVD MECHANISM MODULE section precaution

- 1. Before disassembling the unit, be sure to turn off the power. Unplugging and plugging the connectors during power-on mode may damage the ICs inside the unit.
- 2. To protect the pickup unit from electrostatic discharge during servicing, take an appropriate treatment (shorting-solder) by referring to "the DISASSEMBLY" on page 262.
- 3. After replacing the pickup unit, be sure to check the grating. (See p.196.)
- 4. During disassembly, be sure to turn the power off since an internal IC might be destroyed when a connector is plugged or unplugged.

NAVIGATION UNIT section precaution

- 1. Inverter for LCD back light becomes a high voltage.
- 2. When inspecting the touch panel, use something thin with a round tip such as the touch pen. Furthermore, do not apply excessive force to the touch panel.
- 3. Since this product does not have OSD IC, OSD for adjustment is displayed by using GGF1416 and GGF1463 at the time of monitor adjustment. As you will find lands for 14 pins with 0.8mm pitch at the left top part of the monitor board, directly solder a flexible PCB of GGD1323 for adjustment. As GGD1322 is not used, be careful not to short the terminal.
- 4. The region code determination at the time of DVD hardware change is made by the destination (UC: Region 1, EW: Region 2) of the car control unit.
- 5. If you reconnected the Hide-away unit, press the RESET button.

[Important symbols for good services] In this manual, the symbols shown-below indicate that adjustments, settings or cleaning should be made securely. When you find the procedures bearing any of the symbols, be sure to fulfill them:

5

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

2. Adjustments

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

3. Cleaning

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

4. Shipping mode and shipping screws

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

5. Lubricants, glues, and replacement parts

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount. For replacement parts or tools, the prescribed ones should be used.

5. ELECTRICAL PARTS LIST

NOTE:

- Parts whose parts numbers are omitted are subject to being not supplied.
- The part numbers shown below indicate chip components.

Chip Resistor $RS1/\bigcirc S\bigcirc\bigcirc\bigcirc J, RS1/\bigcirc\bigcirc S\bigcirc\bigcirc\bigcirc J$

Chip Capacitor (except for CQS.....)

6. ADJUSTMENT

6.1 JIG CONNECTION DIAGRAM

*1) After connecting the Hideaway Unit, please perform adjustment.

JIG's List

D

Ε

Function	Name	Jig No.
CC Unit (CN609) <> Main Unit (CN3801)	PCB	GGF1461
CC Unit (CN609) <> GGF1461	40P FFC	GGD1170
CC Unit (CN609) <> GGF1461	20P FFC	GGD1209
CC Unit (CN608) <> Monitor PCB (CN4002)	PCB	GGF1483
CC Unit (CN2701) <> Panel PCB (CN5901)	18P FFC	GGD1208
Monitor PCB (CN4002) <> GGF1483	36P FFC	GGD1366
Monitor Adjustment PCB (*2)	PCB	GGF1416
JIG connector Assy (*2)	PCB and FFC	GGF1463
Monitor PCB ("FOR SERVICE" 14P terminal) <> GGF1463 (*2)	14P FFC	GGD1323
TEST DISC (Operation check)	CD-ROM or DVD-ROM	GGV1137

*2) Since this product does not have OSD IC, OSD for adjustment is displayed by using GGF1416 and GGF1463 at the time of monitor adjustment. As you will find lands for 14 pins with 0.8mm pitch at the left top part of the monitor board, directly solder a flexible PCB of GGD1323 for adjustment. As GGD1322 is not used, be careful not to short the terminal.

6.2 DVD ADJUSTMENT

1) Precautions

This product uses 5V and 3.3V as standard voltages. The electrical potential that is the reference for signals, is not GND, but VREF (approximately 2.2V) and VHALF (approximately 1.65V).

During product adjustments, if the reference voltage is mistakenly taken as GND, and a grounding contact is made, not only would it be impossible to measure the accurate electrical potential, but also the servo motor would malfunction, resulting in the application of a strong impact on the pick up. The following precautionary measures should be strictly adhered to, in order to avoid such problems.

The reference voltage and GND should not be confused when using the minus probe of a measurement device. When an oscilloscope is being used special care should be taken to make sure that the reference voltage is not connected to the probe of ch1 (on the minus side), while the probe of ch2 (on the minus side), is connected to GND. Further, since the body frame of most measurement devices have the same electrical potential as the minus side of the probe, the body frame of the measurement device should be set to floating ground.

If the reference voltage is connected to GND by mistake, turn the regulator OFF immediately, or turn the power OFF.

- · Remove the filters and wires used for measurements only after the regulator has been turned OFF.
- · After the power supply is turned on, regulator ON the following adjustment and measurement are promptly
- Whenever the product is in the test mode, the software will not take any protective action. For this reason, special care should be taken to make sure that no mechanical or electrical shock could be applied to the product when taking measurements in the test mode.
- · Whenever the EJECT key is pressed to eject the disk, no other keys, other than the EJECT key, should be pressed until the disk eject action has been complet-
- · Press the EJECT key only after the disk has stopped completely.
- · If the product hangs up turn the power OFF immediately.
- · Laser didoes may be damaged, if the volume switch for the laser power adjustment of the pick up unit, is turned.

Attention)

· Test mode starting procedure Please select "MS3 check" (page 230) to start test mode.

(Additional Information)

IP-BUS slave unit (i.e. Multi-CD changer) test mode starting procedure.

· To enter the test mode While pressing the SOURCE and ANGLE- keys at the same time, reset.

· Key Assign table

F-close and F-search cannot be executed, unless LD-ON is set. [If F-close isn't executed within 9 seconds after LD-ON, it switches to LD-OFF automatically. And even if F-search is executed within 9 seconds after LD-ON, it also switches to LD-OFF.]

The track number designation is selected from the track numbers already prepared for selection. Switching to cyclic operation is made at step REAR, and the decision is finalized (entered) in step BACK/TEXT.

For CD: Tracks 1, 4, 10, 11 and 32.

5

For DVD: Tracks 1, 4, 10, 11, 32, 64 and 100.

Method for designating an ID address:

• A number of digits are determined through commands RIGHT and LEFT. Numerical UP/DOWN operations are performed through commands REAR and BACK/TEXT. The decision is finalized (entered) with command ATT.

Skew adjustment

If any of the following replacements have been performed on the system, adjustments for pick up, must be conducted:

- 1. Pick up unit replacement
- 2. Spindle motor replacement
- 3. Carriage chassis replacement
- 4. Pick up unit main shaft replacement
- 5. Pick up unit sub-shaft replacement

Measurement device and tools: Oscilloscope

Allen key wrench

40-pin flexible extension Screw rock(GYL1001)

Disk used: GGV1018

3

Symptoms in case of poor adjustment: Error efficiency deteriorated: 10-3 (Optimum value: 10-4 or lower)

High jitter of the RF signal RF waveform deformed

Unstable operation in tracking closing and servo control

Caution: Avoid exposing your eyes to laser beams for a long time.

Preparation for adjustment: Clean both ends of the shafts.

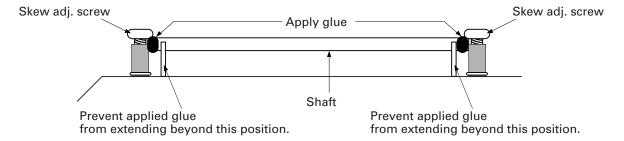

Use brand new skew screws supplied with the service kit GXX1234.

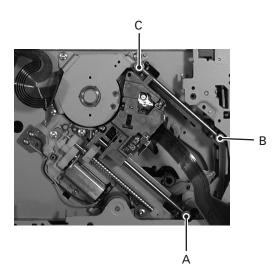

Procedures:

- 1. Place the DVD mechanism module upside down.
- 2. After replacing the pickup (by referring to the procedures of "Removing the Pickup."), roughly adjust the three skew screws through visual check so that the pickup is mounted in parallel to the CRG chassis around the inner and outer tracks.
- 3. Connect an oscilloscope as shown in the connecting diagram.
- 4. Turn on the power of the product. Load the test disc (GGV1018).
- 5. In the front-end test mode, set the disc type to DVD layer 1. Move the pickup toward the inner tracks.
- 6. Turn on the laser diodes.
- 7. With the focus servo closed, complete all automatic adjustments. Close the tracking servo, and then complete all automatic adjustments.
- 8. Observing the RF waveform on the oscilloscope, slightly turn the skew adj. screw C to maximize the RF level. Next, move the pickup toward the outer tracks. Slightly turn the skew adj. screw B to maximize the RF level. Turn the skew adj. screws A and B in the same direction keeping their rotating angles the same until the RF level becomes the maximum.
 - Lastly, move the pickup toward the inner tracks. Turn the skew adj. screw C so that the RF level becomes the maximum.

Repeat the step 8 three times.

- 9. Turn off the power in the test mode. After confirming that the disc has stopped, eject the disc.
- 10. Apply glue to the skew adj. screws and the shafts.

Check 3: Is the streaming I/F operating normally?

Reproduce DVD-REF-A1 Title 1.

В

С

D

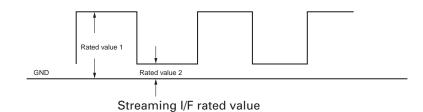

Ε

Checks are to be conducted with a GND reference.

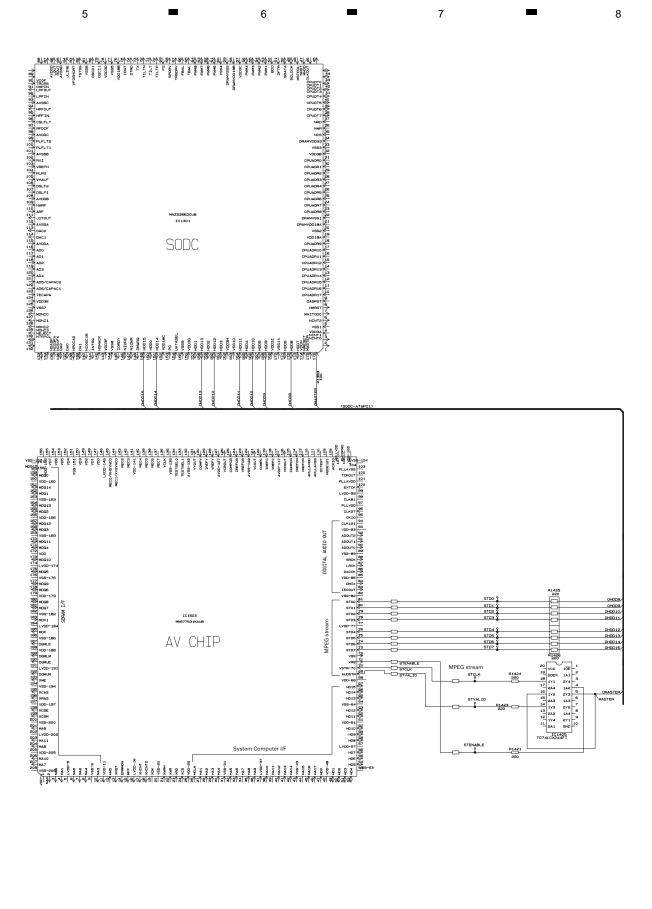

If the locations listed under "verification location 2" can be verified, then there is no need to conduct verifications for the locations listed under "verification location 1."

If the result is not satisfactory, check to see if there are any problems with the resin flux cored solder, parts and components, in areas where a problem occurs, for the overall sequence of "output "input" of the checked location.

NO.	Verification location 1 (contact measurements)	Verification location2	Verification Media	Rated value 1	Rated value 2	Reference waveform	Others
1	STD0	IC1503 81pin	DVD	2V~VCC33	GND~0.8V	Waveform 1	Line name OHDD8 at R1425
2	STD1	IC1503 80pin	DVD	2V~VCC33	GND~0.8V	Waveform 1	Line name OHDD9 at R1425
3	STD2	IC1503 79pin	DVD	2V~VCC33	GND~0.8V	Waveform 1	Line name OHDD10 at R1425

Check 4: Is the audio circuit operating normally?

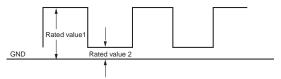

Reproduce DVD-REF-A1 Title 2 Chapter (48V/16-bit/1 kHz/0dB). Verify the circuit described in Figure 2.

Checks are to be conducted using GNDAU1 (sensing pins) as a reference.

If the locations, listed under "verification location 2", can be verified, there is no need to conduct verifications for the locations listed under "verification location 1."

If the result is not satisfactory, check to see if there are any problems with the resin flux cored solder, parts and components, in the vicinity of the main components.

NO.	Verification location 1	Verification location 2	Rated value 1	Rated value 2	Reference waveform
1	AOUT0	IC1503 90pin	2.0V and over	0.8V and lower	Waveform 3
2	SRCK	IC1605 1pin	2.0V and over	0.8V and lower	Waveform 3
3	LRCK	IC1605 3pin	2.0V and over	0.8V and lower	Waveform 3

Three serial output rated values

Checks are conducted with the measurement circuit below.

●EEPROM setting mode

*) Since this product does not have OSD IC, OSD for adjustment is displayed by using GGF1416 and GGF1463 at the time of monitor adjustment. As you will find lands for 14 pins with 0.8mm pitch at the left top part of the monitor board, directly solder a flexible PCB of GGD1323 for adjustment. As GGD1322 is not used, be careful not to short the terminal.

[Operations]

To enter the setting mode, while keeping the EPRTEST terminal at "Low",

turn reset the monitor micro computer. While pressing the [REAR] and [EQ] Kyes at the same time, reset.

Flicker adjustment mode

Line adjustment 1 mode

Line adjustment 2 mode

Dimmer parameter setting mode

[$\uparrow \downarrow$] button: Used to select a desired adjustment item in each mode

[\longleftrightarrow] button: Used to adjust the selected item

Notes:

D

Е

1) The setting values are written in the EEPROM and then the read-out data is displayed on the screen.

WRITE and READ operations are processed by the block data of 16 bits.

The total bits for the settings depend on adjusting items.

2) For CS (Check Sum) items, when the settings are changed, the CS value is written in 8 bits by applying the exclusive OR (XOR). The CS value is first written in the EEPROM and then the read-out data is displayed. If the written data is different from the read-out data, the letter color for the read-out data is changed.

Ε

1) CONTRAST data

The CONTRAST data is adjustable, and used as reference data for other adjustment items, which is not memorized in the EEPROM.

2) BRIGHT and COM AMP data

The BRIGHT and COM AMP adjustments are made by using the same 2-screen IC register(SA22h B7-2: common reverse output amplitude).

Therefore, adjusting one of the data will change the other one.

(3) Line adjustment 2 mode

Adjustment item	Adjustment range	Adjustable name	Settings or written data (DEC)		
Bright (SA22: B7-2)	[0 - 63]	BRIGHT	63		LINE2
Contrast (SA25: B7-1)	[0 - 127]	CONTRAST	127

NAVIGATION TEST MODE

- 1. How to start the test mode
- 1. When +Battery and ACC are ON, push RESET and EJECT buttons simultaneously.
- 2. Release RESET button only.
- 3. When "password entry screen" is displayed, release EJECT button.
- 4. Enter the password.
- 5. When the password has been entered, press [ENTER] key.
- 6. If the correct password has been entered, the test mode menu will be displayed.
- * The password entry screen, as the one used in the previous model, is no longer displayed.
- << Password for the service >>

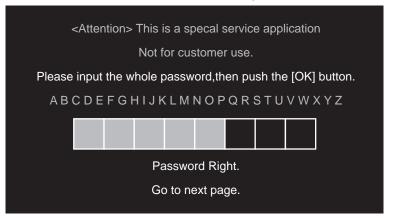

The password is $[\uparrow(up)] \rightarrow [\uparrow(up)] \rightarrow [\downarrow(down)] \rightarrow [\downarrow(down)] \rightarrow [ENTER]$.

If 8 digits or more are entered and [ENTER] key is pressed, it will be treated as a password error.

· Password entry screen

• Password OK: After 2 seconds or so, the screen will automatically move on to the menu screen.

• Password NG: Nothing will be displayed, and reboot action will be taken.

<Caution>

Please trace a white line.

Please move to calibration setup after this setup.

Adjustment steps

- 1) Trace the edge of the screen along the monitor resin frame with a round-headed thing to obtain the coordinates.
- 2) Press the [BACK] kev.

Explanation of the displays

5

 $min_x(A,B)$: X coordinate of the touch panel • minimum value received $max_x(A,B)$: X coordinate of the touch panel • maximum value received $min_y(A,B)$: Y coordinate of the touch panel • minimum value received $max_y(A,B)$: Y coordinate of the touch panel • maximum value received

AVIC-N1/UC

231

Α

В

С

D

Ε

_

- A = A coordinate which is already stored in the SRAM (If there is no previous data in the SRAM, "min=90, max=180" will be displayed).
- B = An updated coordinate which is planned to be set in the SRAM this time (If there is no previous data in the SRAM, "min=90, max=180" will be displayed).
- [BACK]: The preset effective range is registered, and the screen will return to the remote controller inspection menu. The data of the effective range will be recorded in the SRAM.

In case the compensation value is not preset in the SRAM, the following initial (default) value will be entered automatically at the time of navigation system boot up.

 $min_x = 42$ (right edge limit value)

max_x = 246 (left edge limit value)

min_y = 49 (bottom edge limit value)

 $max_y = 238$ (top edge limit value)

2. Setup calibration

В

D

Е

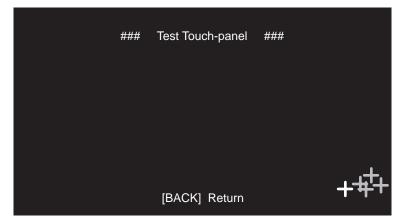

Explanation

- A [+] cursor is displayed at 16 locations on the screen for calibration. Finally, verification of a single point is made. The cursor is always displayed at one location only, and moves on to the next location as the current one is correctly pressed.
- When pressing on the [+] cursor, make sure to press at the center of "+".
- The result of calibration will be recorded in the SRAM.
- If effective operation is not made for 30 seconds, the system will recognize as "erroneous end" and stops the calibration.

232

AVIC-N1/UC

3

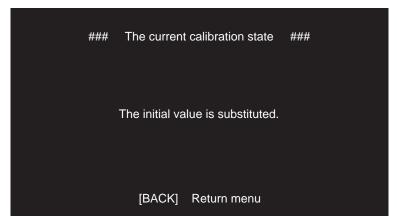

Explanation on touch panel misalignment verification test.

- 1) The test is intended to verify if the touched point on the touch panel is correctly recognized or not.
 - [+] cursor will be displayed at 16 locations on the screen.
 - The cursor will be displayed in "white color" only one at a time.
 - Each time the cursor is touched correctly, the next point will be displayed.
 - On the other hand, if it is recognized that the point touched was ± 4 dots vertically and ± 5 dots horizontally away from the center of the displayed [+] cursor, the erroneously recognized coordinate [+] will be drawn in "red color".
- 2) When touching the [+] cursor, touch the center of the + mark correctly.
- 3) If [BACK] is touched, the test will be finished, and the screen will return to the menu screen of the touch panel test mode.

If this test turns out to be NG, it will be necessary to redo "1. Setup touch-panel effective range" and "2. Setup calibration". Repeat the above steps once again.

4. Check now calibration codition

Explanation on the setting status of the calibration compensation value.

The current calibration compensation status is displayed.

The following data will be displayed.

"With no calibration value" (in white characters)

In case the compensation value does not exist in the SRAM.

"The effective range value is stored"

In case the compensation value for the upper limit and the lower limit are preset in the SRAM.

"The calibration compensation value is stored"

In case the calibration compensation values for the 16 points are preset in the SRAM.

"The effective range & calibration value is stored."

In case the upper limit and the lower limit values and the 16 points calibration values are preset in the SRAM. "The initial value is substituted."

In case the value stored as the initial (default) value is preset in the SRAM.

"Error Condition"

5

In case the SRAM value is demolished or some unexpected situation is happening.

AVIC-N1/UC

233

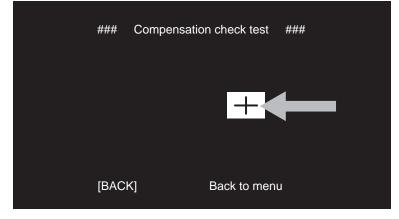

R

С

D

Ε

5. Check Touch-panel compensation

[BACK]: The system will return to the remote controller inspection menu.

Explanation of the inspection details

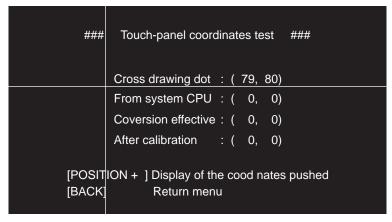

В

D

Ε

- Regarding this inspection, the title only will be displayed at the initialized stage.
- As shown by the arrow, press any desired location on the monitor.
- A coordinate after the calibration correction will be displayed by the [+] mark against the coordinate recognized as pressed.

6. Check Touch-panel graphics

[NAVI] + pressing the touch panel: The coordinate of the touch panel at that time will be displayed.

- [†]: Horizontal line will move upward.
- [↓]: Horizontal line will move downward.
- [-]: Vertical line will move to the left.
- [→] : Vertical line will move to the right.

[BACK]: The system will return to the remote controller inspection menu.

Explanation of the displayed coordinate (from top to bottom)

- (79, 80): Coordinate of the crossing point by the vertical and the horizontal lines (X direction, Y direction). $[(0\sim500, 0\sim240)]$
- (0, 0): AD data value (X direction, Y direction) representing the coordinate of the pressed location received from the system control microprocessor.
- (0, 0): Coordinate (X direction, Y direction) obtained by normalizing the AD data value of the pressed location within the effective range.
- (0, 0): Coordinate (X direction, Y direction) obtained by adding the correction based on calibration to the normalized coordinate.

234

2

AVIC-N1/UC

[BACK] + pressing the touch panel will make the system return to the remote controller inspection menu.

Explanation of the displayed content.

panel x_before: X coordinate normalized (expanded) within the effective range. panel y_before: Y coordinate normalized (expanded) within the effective range. panel x_after: X coordinate obtained by adding the correction based on calibration. panel y_after: Y coordinate obtained by adding the correction based on calibration.

AVIC-N1/UC

1. Error Information

Descriptions of error information, for errors arising from system software problems, will be provided in this section.

Up to eight sets of information, related to the system software's errors, will be stored in the SRAM.

By executing hi_sysdwn() the line number (on which the error occurred), the error code and detailed information of the error, will be stored in the error log.

Hi_sysdwn() will be executed in the following two circumstances:

- 1. hi_sysdwn() will be intentionally stored if fatal errors occur with each BIOS.
- 2. If multiple exceptions, fatal exceptions, illegal command codes and trap command errors occur.

2. Error Log's Entry Function

Up to twenty-four sets of information, related to errors starting with the latest error, will be displayed by the error log entry function.

There are two types of error log displays.

The display will vary when the argument provided to hi_sysdwn(), depending on whether detailed information (such as program name, version number, creation date, creation time and creator name) exists or not.

1. When detailed information exists:

** ERROR INFORMATION **

ERCD = 00000028(40)

FILE = ini_usf.c

LINE = 510(000001fa)

VERS = 1.1.1.1

DATE = 2003/08/08

TIME = 06:07:26

AUTH = daisuke

ERROR-TIME ffff-ff ff:ff:ff

No.4 ← ERROR No.3 → No.2

Stop when push [BACK] button.

ERCD	Error code.
FILE	Error occurring program name.
LINE	Error occurring program line number.
VERS	Error occurring program version number.
DATE	Error occurring program creation date.
TIME	Error occurring program creation time.
AUTH	Error occurring program creator name.
ERROR-TIME	Error occurrence date and time.

AVIC-N1/UC

237

В

С

Ε

2. When detailed information does not exist:

** ERROR INFORMATION **

type = 000000b7(183)
ercd = ffffc002(-16382)
inf = ffb7ac18(-4740072)

ERROR-TIME ffff-ff ff:ff:ff
No.2 ← ERROR No.1 → No.24
Stop when push [BACK] button.

type	Error occurring program line number.
ercd	Error code.
inf	System down information.
ERROR-TIME	Error occurrence date and time.

If an error occurs due to a multiple exception, the definitions will change to the following:

type	Execution address at the time of error occurrence.	
ercd	Contributing factor for the exceptions.	
inf	Program status word at the time of error occurrence.	
ERROR-TIME	Error occurrence date and time.	

3. Error Information Switch

The product (with default settings) will display error messages to the user if an error occurs. Error information can be displayed if an error occurs by switching the error information in the test mode. In either case, the error log entry display will be the same.

- 1) Error message display (default settings):
- · Setting in the test mode:

1. Change to display error [Message] 2. Start within debug shell [On] 3. Program loading [Disc version] 4. GPS assessment 5. File maintenance 6. Program forced write <== back page ==> next page SYSTEM Ver.: [BOOT]0.65 [OS]0.65

238

ERROR-TIME ffff-ff ff:ff:ff

4. Watch dog timer

С

D

Ε

This product has a built-in mechanism to monitor at a certain interval whether the software is correctly operating or not.

Once this mechanism becomes inoperable, "reset request" will be sent to the power supply microprocessor when a preset time (approximately 4 seconds) has elapsed.

AVIC-N1/UC

In order to record operational situation of such an occasion, a special code which is not an error code is recorded in the ERCD.

6.8 USING THE TEST DISC

TEST DISC Part No.: GGV1137

REMOTE CONTROLLER Part No.

Part No.	Description
CXB7427	Co-packed remote controller with AVIC-8DVD/EW
CXB7426	Co-packed remote controller with AVIC-9DVD/EW, UC
CXB9118	Co-packed remote controller with AVIC-8DVD-2/EW, -9DVD-2/EW, -90DVD/UC
CD-R11	Optional remote controller

1. Start/End

1-1. Start

When the test disc is inserted, the title "NN622/NN623 TEST DISC" will be displayed. If [RETURN] key is pressed while the title is being displayed, the menu screen will be displayed. If no key is pressed, the first screen of the inspection screen for line will be displayed.

1-2. End

No action is taken.

2. Key operation

- · In the case of inspection screen for line
- 1. The inspection screen and the menu screen can be switched alternately using the [CR] key on the remote controller.
- 2. The screen will go back to the previous screen by the [†] key on the remote controller.
- 3. The screen will move forward to the next screen by the [↓] key on the remote controller. (Unless the inspection is finished, the screen will not move forward. The screen will not move forward, too, if there is an NG item.)
- * Refer to the explanation of each screen for the details.
- In the case of service menu screen
- 1. Select an inspection item by the [↑] and [↓] keys on the remote controller, and inspection screen will appear when the [CR] key is pressed.
- 2. When the [RETURN] key on the remote controller is pressed, the screen will go back to the menu screen.
- * Refer to the explanation of each screen for the details.

1. Connection check

1. Connection check Illumination signal Parking brake signal ON Reverse gear signal Car speed signal **REV** Gvro LEFT << 42374 Gyro voltage 2.434V OK délta sigma Battery voltage G sensor G sensor voltage delta sigma Remote controller Mic connect [joy stick down] It progresses to the next inspection.

- The status of the item indicated in the above figure will be updated every second.
- Set ANTON port to H when starting the inspection and set to L when ending.
- When the gyro is in operation, a BEEP sound will be made when the G sensor is activated. Right: 500Hz, Left: 700Hz. Up: 800Hz, Down: 600Hz
- Conditions for moving on to the next inspection

Illumination status is changing between ON and OFF.

Parking brake status is changing between ON and OFF.

Reverse status is changing between NOR and REV.

Pulse is changing to a value other than 0/0.

Mic connect status is changing between ON and OFF.

All keys on the main body as listed below have been pressed at least once.

Standard value for other items

GYRO voltage

OK: 2.5±0.15

USABLE: 2.5±0.30

GYRO variation

OK: Less than 30

 G sensor voltage OK: 2.5±0.15

USABLE: 2.5±0.30

G sensor variation

OK: Less than 60

• Only when all the conditions are met, you can move on to the next inspection by the [\] key on the remote controller. It should be noted, however, that you will not be able to move on to the next inspection if there is an error (background color is red) even if the conditions are met.

<Supplemental explanation regarding error display>

Displayed message	Details of the error
Structural data error	An error when data cannot be received from A/D converter.
	Defective device of the A/D converter seems to be the cause.
	It will also happen in case the vehicle speed pulse cannot be measured. (rare)
No connection to DRAGON	An error when communication with DRAGON cannot be established.
	Communication error due to a hardware problem could be the cause.
	It is highly possible that the hardware on the DRAGON side is defective.
Command error	Time out error for response to BIOS call.
	Communication error due to a hardware problem could be the cause.
	It is highly possible that the hardware on the DRAGON side is defective.
Unknown error	Error due to unknown reason.

2. Dual Illumination color check

2. Dual Illumination color check

[NAVI] The color of illuminations is changed.
[joy stick down] It progresses to the next inspection.

- Color switching for dual illumination can be made.
- In the case of UC model, this inspection will not be performed, and the system will move on to the next inspection.
- Color is changed to GREEN/LED by the [NAVI] key on the remote controller.
- Move on to the next inspection by the [↓] key on the remote controller.

3. Touch Panel check

В

С

D

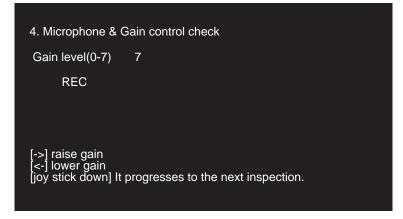

Е

- Touch panel inspection must be performed at 16 locations.
- If the coordinate obtained by pressing the white spot is within the effective range, it will be determined as OK, and the next white spot will be displayed.
- If the coordinate obtained is outside of the effective range, it will be determined as NG.
- If all 16 locations turned out to be OK, then this test is considered to be OK.
- If coordinate cannot be obtained in approximately 5 seconds after the white spot is displayed, the inspection is determined as NG.
- Only if the inspection is OK, the inspection will move on to the next step by the [\ \ \] key on the remote controller.

252

AVIC-N1/UC

- The voice channel is inspected by recording the voice from MIC input (Lch) on a memory, playing back the recorded data and outputting from the SP.
- Recording of MIC input voice and playback of the recorded data is done at every second. ("1 second recording 1 second playback" will be repeated during inspection.) "REC" and "PLAY" will be displayed on the screen during
 recording and play back, respectively.
- · Voice channel

MIC voice input → ADC Lch input → ASIC voice block → Data storage (recorded on the memory)
Play back of recorded voice data → ASIC voice block → DAC Lch output → SP output

Operation (remote controller)

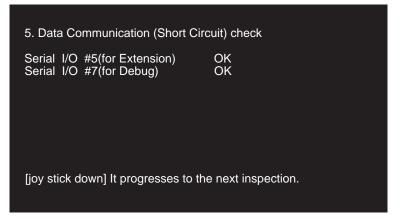

[-]: MIC input gain (PROGGAIN0-2) is lowered.

[→]: MIC input gain (PROGGAIN0-2) is increased.

[NAVI]: Muting of ONSEIMUTE signal is switched between ON and OFF by a toggle switch.

[↓]: Move on to the next inspection.

5. Data Communication (Short Circuit) check (Not for service)

- SIO connection short is checked.
- Loop back check is performed on 5CH and 7CH.
- · Wait screen is displayed until the checking is completed.
- When [RETURN] key on the remote controller is pressed while the inspection result is being displayed on the screen, inspection will be performed once again.
- Only in the case of OK, you can move on to the next inspection by the [↓] key on the remote controller.

AVIC-N1/UC

С

D

Ε

6. Data Communication (Open Circuit) check

Serial I/O #5(for Extension) OK
Serial I/O #7(for Debug) OK

[joy stick down] It progresses to the next inspection.

• SIO connection open is checked.

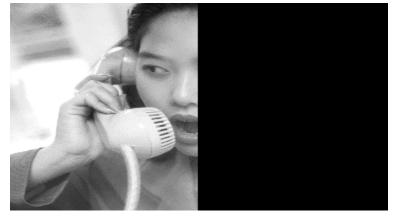

В

D

Ε

- Check is performed on 5CH and 7CH.
- Do not connect anything to the terminal. OK will be indicated under "open" condition.
- Wait screen is displayed until the checking is completed.
- When [RETURN] key on the remote controller is pressed while the inspection result is being displayed on the screen, inspection will be performed once again.
- Only in the case of OK, you can move on to the next inspection by the [\ \ \ \] key on the remote controller.

7. Natural Drawing & Rear View

- Natural image consisting of 256 colors will be drawn on the BG screen.
- ADPCM 1kHz sine wave at the sampling rate of 19kHz will be output for 30 seconds.
- Rear view image will be displayed on the right hand side of the screen.
- GUIDEON terminal will be set to H when entering the screen, and set to L when exiting the screen.
- Volume level can be changed by the [←] and [→] keys on the remote controller. (0 to 9)

[JPEG file name: ZHITO1.JPEG] [Voice file name: A19K01KS.WAV]

• You can move on to the next inspection by the [\ \] key on the remote controller.

254

AVIC-N1/UC

8. VTR check

[joy stick down] It progresses to the next inspection.

- External input image (VTR input image) is displayed and voice is outputted.
- You can move on to the next inspection by the [↓] key on the remote controller.
- 9. FM multiplex tuner error rate measurement

9. FM multiplex tuner error rate measurement

Push Back key to go to re-check.

FM Frequency 87.50
Frequency to check 87.50
Blocks Received Correctly 0500
Blocks with one bit corrected 0000
Blocks with two bits corrected 0000
Blocks Received with error 0000

[<--> to adjust FM frequency]
[joy stick down] It progresses to the next inspection.

- FM multiplexing error is measured.
- In the case of UC model, this inspection is not performed and the system will move on to the next inspection.
- Default frequency is 87.5MHz.
- When entering this mode for the first time, the result of measurement at the time of test disc boot up will be displayed.
- After the measurement is taken, the frequency can be changed by the [←] and [→] keys.
- 500 blocks will be measured, and if there are 450 or more blocks without error, then it will be determined as OK.
- Only in the case of OK, you can move on to the next inspection by the [\dagger] key on the remote controller.

3

- 1. Hold the upper and main frames.
- 2. Do not hold the front portion of the upper frame. It is a delicate part.
- 3. Do not touch the switches on the top panel.
- 4. Be careful not to catch the flexible cables.

Removing the DVD Core Unit(MS3)

- 1. Set the mechanism to the lock position (disc load standby position).
- 2. Place the mechanism module upside down.
- 3. Short the two lands on the pickup flexible cable as shown below.
- 4. Be sure to disconnect the pickup flexible cable and the CRG flexible cable from the connectors to protect them from damages.
- 5. Remove solder from the load motor leads and clamp SW leads.
- 6. Loosen the two fixing screws. Lift the position A of the DVD Core Unit lightly and move it in the direction B to remove it. Be careful not to damage the flexible cable C.
- 7. Disconnect the 8/12 detection flexible-cable from the connector.

В

С

D

Ε

Removing the Pickup Unit

В

D

Ε

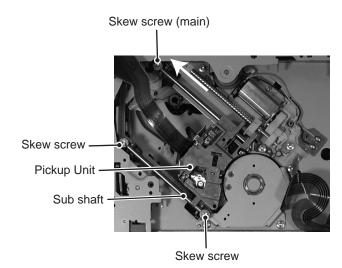

- 1. Remove the module pc board in accordance with the procedure of "Removing the module pc board."
- 2. While holding the pickup case, remove the Skew screw (main).
- 3. Lifting the end of the pickup rack, slide the main shaft, and remove the Pickup Unit.

Replacing the pickup unit requires the skew adjustment.

Remove glue from both ends of the main and sub shafts, and skew stud.

Do not reuse the old skew screw. Be sure to use a brand-new skew screw supplied with a new Pickup Unit.

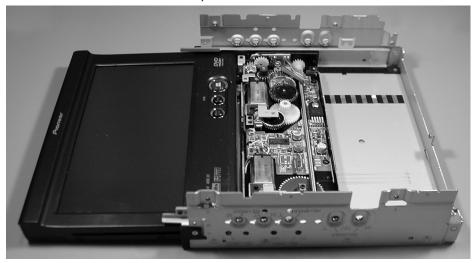

Fix the skew screw with Screw lock (GYL1001) after adjustment.

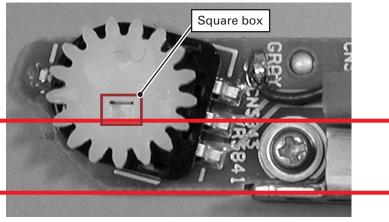

AVIC-N1/UC

When install the Volume Unit, adjust the positioning of the rotating angle of the gear.

1. Set the Monitor Unit horizontally with the Main Unit of the Drive Unit.

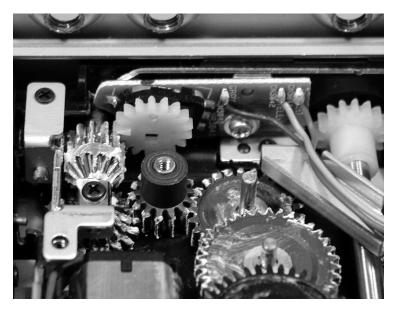

2. When install the gear unit, rotate the gear by hand until the square box of the gear keeps in a horizontal position like the figure below.

*Gap of one teeth is acceptable.

Pin No.	Pin Name	I/O	Function and Operation
PIN NO.	ARMSW	0	LED light output
2	NFANCNT	0	CC Unit Fan motor control output
3	AFANCNT	0	Power amplifier IC Fan motor control output
4	ILMPWR	0	Illumination ON output
5	REAON	0	Illumination ON output Illumination color select output, when the rear monitor is ON (H : Green, L : Amber)
6	CNVSS	Ī	Connect to GND
7	DISC	i	Disc detect input
8	EJECT	l I	Disc eject input
9	RESET	<u> </u>	Reset input
	XOUT	Ö	Crystal oscillator connection pin
11	GND		GND
12	XIN	- 1	Crystal oscillator connection pin
	VDD		VDD
14	INT	- 1	Connect to VDD
15	BSENS	i	Backup sense input
	ASENS	i	ACC sense input
17	FDSEN	i	Grille detach sense input
	RST3	Ö	Navigation control reset output
19	AUPW	Ö	Audio power supply control output
	DRAMPW	Ö	Navigation control DRAMPW output
21	BEEP	Ö	BEEP output
22	RXN	Ī	Data input from Navigation (UART)
	TXIN	Ö	Data output to Navigation (UART)
	TSO	Ö	Data output to Hideaway Unit (UART)
	TSI	Ĭ	Data input from Hideaway Unit (UART)
	TSCK	i	Test program clock input
27	BUSY		Not used
	CCON	0	Navigation control CCON output
	XCCSTB	Ĭ	Stand-by OK of the CC Unit input
	CPUWDT	i	Watch dog timer input
	IRQPW	Ō	Navigation control IRQPW output
32	RSTOUT	Ō	Navigation control RSTOUT output
	MUTEPE		Not used
34	MUTNS	0	Mute output at the time of MIX
35	SELL	Ō	Navigation voice Lch MIX control output
36	SELR	0	Navigation voice Rch MIX control output
	VFSEL	0	Front monitor source select output (H : Hideaway Unit, L : MS3)
	VRSEL	0	Rear monitor source select output (H : Hideaway Unit, L : MS3)
39	VSEL3		Not used
40	DATA		Not used
41	CLK		Not used
42	CS		Not used
	AMPSTB	0	Amplifier stand-by output
44	ILMSEL	0	Illumination color select output (H : Amber, L : Green)
45	ILMDIM	0	Sub display DIM power supply control output
	DSENS	I	Detach sense input
	ILMSENS	- 1	Illumination sense input
	PBSENS	I	Parking brake sense input
	TELIN	I	TEL mute input
	ASENBO	0	ASENS output
51	MUTESO	0	Mute output
52	LIFTPUL	1	Lift pulse input
53	MTRS	0	Flap motor speed control output
54	MTRPW	0	Flap motor control power supply output
55	MTR1	0	Flap angle motor control signal output
	MTR1	0	Flap position motor control signal output
57	MTRSEL	0	Flap motor control output
58	ANGLE0SW		Flap angle 0 sense input
	LIFTSW	I	Lift sense input
60	SENSE5	0	Pulse power supply control output
61	ANTPW	Ō	Auto antenna power output
	WCONT	I	Wired remote control SEL input
63	TESTIN	I	Test mode input
64	TIMEOUT	I	Timeout input
65-67 68	SIMUKE0-2 51MUTE	0	Model select input0-2 5.1 ch mute output

^{*} PE5412A(UC model) * PE5411A(EW model)

No.	Symbol	I/O	Pr			
1	AMANT	- 1	AM antenna input	AM antenna input high impedance AMANT pin is connected with		
				an all antenna by way of 4.7μH. (LAU type inductor) A series circuit		
				including an inductor and a resistor is connected with RF ground for		
				the countermeasure against the hum of power transmission line.		
2	RFGND		RF ground	Ground of antenna block		
3	FMANT	- 1	FM antenna input	Input of FM antenna 75 Ω Surge absorber(DSP-201M-S00B) is necessary.		
4	VCC		power supply	The power supply for analog block. D.C 8.4V \pm 0.3V		
5	SL	0	signal level	Output of FM/AM signals level		
6	CE2	П	chip enable-2	Chip enable for EEPROM "Low" active

7.3 EXPLANATION

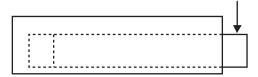

7.3.1 MECHANISM DESCRIPTIONS

Outline of the FLAP motion

- 1. The motion is actuated made by two motors, the forward/backward driving motor (CXB9515) and the angle driving motor (CXB9516).
- 2. Analog electric potential generated by the angle encoder is detected to detect angle motion status and motion position.
- 3. Memory function for the angle last position is accomplished by the micro processor using the 256 resolution steps of the VDD.
- 4. A pulse is detected by the photo interrupter to detect the horizontal motion status.
- 5. In the case of reset start, the monitor will be in a stored position first, and ejection motion will take place, which puts the system in the booted up state.
- 6. Angle adjustment is made by the angle key (+/-).
- 7. OPEN/CLOSE key makes the monitor stored or ejected, and temporary folding key folds the monitor temporarily.
- 8. Setting of the monitor auto storage/ejection ON/OFF and set back ON/OFF at the time of ACC ON/OFF is made on the navigation menu screen.
- 9. A backlight is switched-off during forward/backward and storage.

Explanation on the FLAP ejection motion

1. When the OPEN key is pressed or ACC is set to ON while the auto OPEN/CLOSE is being set to ON, angle driving motor rotates in the 0° direction for 500ms. (Pressed down.)

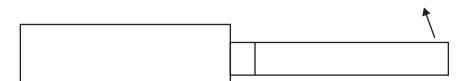

2. After 500ms, the angle driving motor is stopped, and the forward/backward driving motor rotates in the ejection direction.

3. For a period of 600ms from the time when LIFTSW is switched from H to L, the forward/backward driving motor keeps rotating in the ejection direction.

4. After 600ms, the forward/backward driving motor is stopped, and the angle driving motor rotates in the UP direction.

AVIC-N1/UC

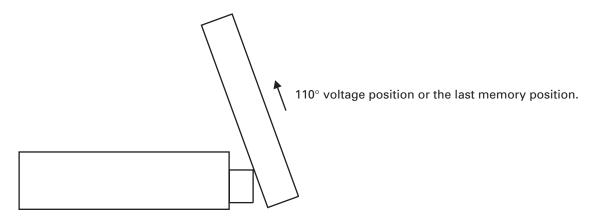

Α

В

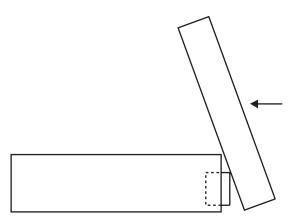

С

D

Ε

6. When the setback is set to ON, after the monitor angle voltage has reached the previously memorized voltage, brake is applied to the angle driving motor, then the forward/backward driving motor is rotated in slow speed in the storage direction. After that, when LIFTSW has switched from L to H, the forward/backward driving motor is stopped.

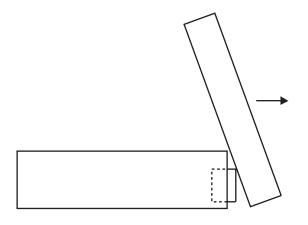

Explanation of the FLAP storage motion

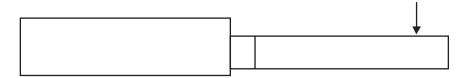

С

D

Е

1. When CLOSE key is pressed, or after 6 seconds from ACC OFF when auto OPEN/CLOSE is being set to ON, the angle driving motor is rotated in the 0° direction. In case the setback setting is ON, the forward/backward driving motor is rotated in high speed in the ejection direction and the motor continues to rotate for 600ms from the time when LIFTSW is switched from H to L, then the angle driving motor is rotated in the 0° direction.

3. After 500ms, brake is applied to the angle driving motor, and then the forward/backward driving motor is rotated in the storage direction.

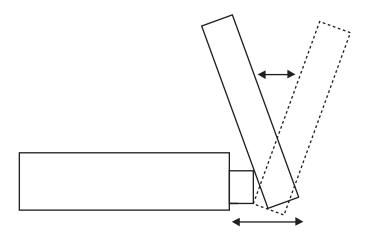

4. When the horizontal motion detection pulse is no longer detected for 200ms, brake is applied and the monitor storage motion is completed.

Explanation on the FLAP angle adjustment

5

1. The angle driving motor is rotated in UP direction by the "+" key and in DOWN direction by the "-" key from the monitor stop position. If the key is kept pressed, the monitor will keep changing the angle without steps within the range of 50 to 110 degrees. When the setback is being set to ON, the forward/backward driving motor is rotated in the horizontal ejection direction while the key is being pressed, and angle adjustment is made by changing the angle voltage to the extent the angle adjustment key is effective after 600ms has elapsed from the time when LIFTSW has switched from H to L. When 3 seconds have elapsed from the time of angle adjustment completion, the forward/backward driving motor is rotated in slow speed in the horizontal storage direction, and brake is applied when LIFTSW has switched from L to H.

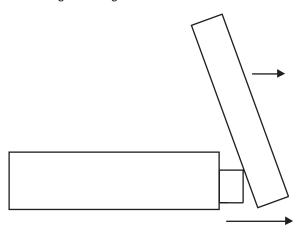

В

D

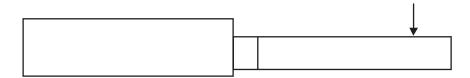

Ε

■ Explanation on the FLAP temporary folding operation

1. By pressing the temporary folding key, the angle driving motor is rotated from the monitor stop position toward 0° direction. When the setback is being set to ON, the forward/backward driving motor is rotated when the key is pressed, brake is applied after 600ms has elapsed from the time when LIFTSW has switched from H to L, and the angle driving motor is rotated in 0° direction.

2. For a period of 500ms after DEGOSW has switched from H to L, the angle driving motor is rotated, and the monitor stops at its horizontal position by the brake. After 7 seconds, navigator operation sound is heard three times in 1 second interval. After 10 seconds, the angle driving motor is rotated in UP direction, and then the brake is applied to stop the motor at the last memory position. When the setback is being set to ON, after the angle driving motor stops at the last memory position, the forward/backward driving motor is rotated in slow speed in the horizontal storage direction, and the motor stops after LIFTSW has switched from L to H.

Notes related to the FLAP motion

В

С

D

Е

- 1. Regarding the angle position, angle voltage is always checked, and the last memory is stored by addition or subtraction of the voltage. It should be noted, however, that the last memory will not be stored when the monitor is manually moved by force.
- 2. If the expected pulse is not detected during horizontal motion, the monitor will stop at that position.

■ Monitor Unit

- * 1 : While MFLPW will turn ON by the backlight ON command, it will not turn ON for at least 700ms after MVIPW ON.
- * 2 : In case connection response is not received from the system microprocessor within 200ms from the transmission of connection request, retry process will take place. Retry process will take place for 200ms x 16 times. In case the retry process is finished without receiving the request signal, the initial communication is determined to be NG (connection NG), and no more process will take place.
 - * 3 : After 48 ms from the monitor power ON, the touch panel process (taking in AD coordinate) will take place.

7.4 CLEANING

Before shipping out the product, be sure to clean the following portions by using the prescribed cleaning tools:

Portions to be cleaned	
DVD pickup lenses	Cleaning liquid: GEM1004 Cleaning paper: GED-008

Portions to be cleaned	Cleaning tools
Fans	Cleaning paper : GED-008

8. OPERATIONS

3

(1) DISP button

D

Ε

Press to select different displays.

(2) PGM button (AVIC-N1/UC)

Press to operate the preprogrammed functions for each source.

(2) TA/NEWS button (AVIC-X1/EW)

Press to turn traffic announcements function on or off. Press and hold to turn NEWS function on or off.

(3) Sub display

Current time or the information of the audio source currently playing is displayed when the LCD panel is closed.

(4) Ambient light sensor

Senses ambient light. This system automatically adjusts the brightness of the display to compensate for ambient light.

(5) FLIP DOWN/CLOCK button

Press to turn the LCD panel horizontal temporarily when the LCD panel is upright.

Press to turn the clock of the sub display on or off when the LCD panel is closed.

(6) OPEN/CLOSE button

Press to open or close the LCD panel.

5

(7) NAVI/AV button

Use to switch between Navigation map displays and audio operation displays.

(8) POS button

Press to view the map or return to guidance. Also, when the map is scrolling, pressing this button returns you to the display of the map of your surroundings.

Use to switch the view mode of the navigation when the map of your surroundings is displayed.

(9) NAVI MENU button

Press to display a menu of Navigation.

(10) RESET button

Press to return to the factory settings (initial settings).

(11) **DETACH** button

Press to remove the front panel from the display

(12) Joystick

Move to do manual seek tuning, fast forward, reverse and track search controls. Push to display **A.MENU**.

(13) EQ button

Press to select various equalizer curves.

(14) EJECT button

Press to eject a disc from this unit.

(15) BAND button

Radio:

Press to select among three FM and one AM bands.

Built-in DVD drive:

When playing back a disc containing an MP3 file and audio data (CD-DA), pressing this button switches playback between the MP3 file and CD-DA. Touch and hold this button when a disc containing an MP3 file is inserted returns you to the root folder.

(16) ANGLE (+/-) button

Press to change the LCD panel angle.

(17) WIDE button

Press to select a desired mode for enlarging a 4:3 picture to a 16:9 one.

Press and hold to enter the **PICTURE ADJUST** mode.

(18) REAR button

6

Press to output to the REAR OUT terminal the sound and images of a disc inserted in the built-in DVD drive that is different the currently selected source.

(19) ENT button

Press to switch between the background displays

(20) Disc loading slot

Insert a disc to play.

(21) SRC (SOURCE) button

This unit is turned on by selecting a source. Press to cycle through all of the available sources. Press and hold to turn the source off.

(22) VOLUME/ATT button

Rotate to increase or decrease the volume. Press to quickly lower the volume level, by about 90%. Press once more to return to the original volume level

(23) LCD panel

(24) LCD screen

After Installing the Unit

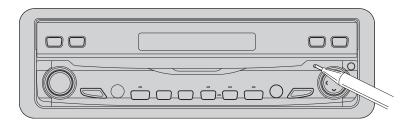

1. Reconnecting the battery.

First, double-check that all connections are correct and that the unit is installed correctly. Reassemble all vehicle components that you previously removed. Then reconnect the negative (—) cable to the negative (—) terminal of the battery.

2. Start the engine.

3. Press the RESET button on the display unit.

Press the RESET button on the display unit using a pointed object such as the tip of a pen.

4. Enter the following settings:

- ¥ Install the programme in the navigation system.
- ¥ Drive until the initialized sensors start operating normally.
- ¥ Set the time and language.

Note:

В

С

D

Ε

If you reconnected the Hide-away unit, press the RESET button.

After installing the unit, be sure to check at a safe place that the vehicle is performing normally.
